Day 4

who does what?

just me, for now.

hey, builder!

Faisal Farouq = project owner

Lead the project, keep the records, decide the scope and budget, and bring in specific help when the work calls for it. Ownership does not establish specialist qualifications.

Help I can bring in later

Test director

UNASSIGNED

Runs the released test and controls stop/abort decisions.

Mechanical reviewer

UNASSIGNED

Reviews load paths, joints, fixtures and structural drawings.

Electrical reviewer

UNASSIGNED

Reviews power, batteries, protection and electrical installation.

Controls reviewer

UNASSIGNED

Reviews motion limits, independent stops and fault behavior.

Rigging provider

UNASSIGNED

Provides the reviewed support, arrest and anchorage arrangement.

Qualified fabricator

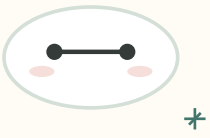

UNASSIGNED

Makes released parts and returns inspection evidence.

A role is a job to cover, not necessarily a different person. One qualified person or outside shop can cover compatible jobs. Required independent reviews still need independence.

Day 4 document check: PASS

Seven roles recorded. Six specialist appointments still open.

when I ask for help

For each role, check relevant competence, confirm availability and record written task authority before the affected physical work.

Test director

Show: Relevant robot tests, fault response and stop/abort decisions.
Confirm: The actual setup, briefing and test dates at the venue.
Write down: A stage-specific permit, protocol/configuration, operators and limits.

Mechanical reviewer

Show: Load-path, fixture, joint and structural drawing/calculation experience.
Confirm: Review dates, comment closure and any needed inspections.
Write down: A signed review of the exact revisions and unresolved hold points.

Electrical reviewer

Show: Relevant battery, protection, wiring and integration competence.
Confirm: Review, inspection and affected energization dates.
Write down: The exact power configuration, work scope and who is authorized.

Controls reviewer

Show: Independent stops, interlocks, restart, watchdog and limit-set review.
Confirm: Design-review and affected staged-test dates.
Write down: A signed controller/version and limit-set review with clear scope.

Rigging provider

Show: Site-relevant support/anchor competence and rated-equipment records.
Confirm: Site survey, installation, inspection and test-support dates.
Write down: The support/arrest design, use conditions, inspections and site permission.

Qualified fabricator

Show: Skills for the actual materials/processes and inspection capability.
Confirm: A quote, production slot, inspection and delivery dates.
Write down: A released work order with drawing revisions, materials and hold points.

These are future checks. All six roles remain UNASSIGNED.

Today's PASS covers the completeness of this list. No specialist competence, equipment access, physical-task permit or engineering release has been established.

Sources: R0.1 mission, engineering baseline, access register and D-02 decision; R0.2 Day 3 checklist; your Day 4 solo-project statement. Full role-specific details and source references are in the CSV.

Next: Day 5 - expose the budget gap.
